

Storey — 180-day roadmap

2026-08-20 → 2026-11-17

Do not open this document until `ROADMAP-90.md` shows:

1. Production track promoted ✓
2. v1.2 shipped — all 8 items ✓
3. ≥5 paying contractors with ≥₹5k MRR ✓

If those three boxes aren't ticked, close this file and finish the 90-day work. The 180-day plan is built on the assumption that the 90-day milestones are real.

The 180-day theme

From founder-led pilot sales to founder-led repeatable sales.

90 days got you 5 paying customers — each one a manual, high-touch sale. 180 days is about turning *that* into a system: a referral engine, a CA introduction channel, and a feature set that doesn't need you to demo it.

Three milestones — these are the gates for the next 90 days

DAY 120 → 10 paying customers · ₹15-30k MRR · first multi-site customer
DAY 150 → v1.3 shipped (ONE feature based on data, not vibes)
DAY 180 → 20 paying customers · ₹40-80k MRR · 30% of new customers from referral

Customer lane

Item	Done =
Reach 20 paying contractors	20 active subscriptions, ₹40–80k MRR at avg ₹2–4k/site
One multi-site contractor (≥ 3 sites in one tenant)	Validates scale economics. Same contractor signs for 3+ projects.
30% of new customers from referral or advisor intro	Sales = relationship-driven, not cold WhatsApp
First "case study contractor"	Someone willing to be referenced publicly + on video
Monthly customer touch — every paying contractor	1-on-1 WhatsApp or call per customer, per month, no exceptions
NPS-style monthly survey — 3 questions, WhatsApp form	Baseline number established. Repeat monthly.

Product lane

Item	Done =
Choose v1.3 feature based on real usage data, NOT instinct	Top-asked feature among ≥ 5 paying pilots. Document the evidence in <code>docs/TODO.md</code> .
Ship v1.3 — single big feature, not five small ones	One thing, done well, live by Day 150
Mobile APK performance + size audit	Lighthouse + bundle audit. Any single page <2s on 3G. APK <30 MB.
First proprietary insight surfaced in-app	E.g. <i>"Cement consumption is 22% above plan at NH-37"</i> — actionable insight, not a chart
Hindi/Assamese language toggle — IF and ONLY IF a paying customer asks	Behind Settings, opt-in, never default
Backup audit — confirm "Your data, your Drive" is actually running daily for every paying tenant	Logged, monitored, alert if a backup misses

v1.3 candidates to evaluate at Day 100, pick ONE:

- Project timeline (read-only Gantt)
- Material master catalogue (consistent material names across sites)
- Voice input for daily logs (Hindi/Assamese speech-to-text)
- Notifications (in-app centre + WhatsApp summary)
- Stock-adjustment approval workflow

Don't pick more than one. Two half-built features beats neither but loses to one finished feature.

Business lane

Item	Done =
Pvt Ltd actively operational	All Storey services moved under the company. Bank account active.
Sign 1 real annual contract (not just monthly subscription)	≥₹50k annual deal — first commitment of >₹X/year from one customer
First "month where MRR > your minimum salary"	Founder cashflow self-sustaining. Subsidy from family ends here.
Trademark "Storey" / "Storey Infra" filed	IP protection started
Engage CA on monthly retainer	₹3–5k/month CA covers GST, books, advisory
Draft v2 pricing — annual + multi-site bundles	Move beyond per-site flat fee. Discounts for annual, volume
First proper "Storey contract" template	Not just a WhatsApp handshake — a signable PDF

Advisor lane

Item	Done =
Avinash + Upmanyu formally on bench (FAST agreements signed)	0.25–0.5% each, 2-year vesting, 3-month cliff. Requires Pvt Ltd.
Add slot #2 (B2B SaaS GTM operator)	1 confirmed candidate — someone from Khatabook / Vyapar / Tally alumni
Add slot #3 (NE network) — preferably the incubation-centre head profile	1 confirmed candidate from IIM Shillong / IIT-G / Assam Startup
First introduction to a Bangalore SaaS founder via Upmanyu	Network expands beyond NE. Builds optionality.
Monthly 30-min advisor sync — each advisor	Cadence established. They earn their equity.

Marketing lane

Item	Done =
CA-targeted one-pager — <i>"Tell your contractor clients about Storey"</i>	One-pager in Hindi + English. Distributed to 30 NE-India CAs.
Single proper case study published	storeyinfra.com/customers/ with metrics, photos, quotes
First non-startup press mention	Coverage in any regional construction newsletter, WhatsApp group, or trade publication
Founder content piece	One written or audio piece: "The contractor who built ConTech"
Refresh feature poster to v1.2 features	New posters for printing + WhatsApp
Storey Community on WhatsApp (<i>only for paying customers</i>)	1 announcement channel + 1 feedback sub-group. Don't open it until 10+ customers.

What NOT to do in the next 90 days

- **✗ Don't raise.** Even if an angel shows up with a ₹20L cheque. Your terms get worse the earlier you raise. Build MRR first.
- **✗ Don't hire engineers.** First hire is **customer success / onboarding** — the lane where you're the bottleneck.
- **✗ Don't pivot.** No matter how shiny another vertical looks. Storey is ConTech, NE-India SMB, Tally-killer wedge. Stay.
- **✗ Don't build self-hosted / enterprise.** It's a multi-month engineering trap dressed as opportunity.
- **✗ Don't accept advisor candidates who want >0.5% or won't sign a FAST agreement.** A famous name who never replies is worse than an unknown name who does.
- **✗ Don't open ROADMAP-365.md yet.** Two milestones away. Stay here.

Weekly review cadence — every Monday at 9 AM

Open this document + ROADMAP-90.md archived. Mark progress. Set this week's intent. **Stay in this horizon — don't drift into 365.**

If a week passes with no new customer conversation, the roadmap is **not the problem** — your priorities are. Diagnose, course-correct.

When to graduate to the 365-day roadmap

Open docs/ROADMAP-365.md only when **all three** are true:

1. ≥20 paying contractors

2. ₹40–80k MRR

3. v1.3 shipped — single feature, customer-validated

If you hit only 2 of 3 by Nov 17, the 180-day work continues. Don't chase scale before the unit economics are clean.
