

Storey — Tester Onboarding Manual

Send this to every tester right after you add their Gmail to Play Console. Visual version: [storey-tester-guide.jpg](#) (paste both in the WhatsApp reply).

Hi — welcome to the Storey beta.

You're one of the first contractors trying Storey before public launch. Your feedback shapes what we ship over the next 4 weeks (v1.2).

This guide gets you from "added to the list" → "using the app on your site" in about 10 minutes.

Part 1 — Get the app installed (*takes ~3 minutes*)

Step 1 — Open this link on your Android phone

```
https://play.google.com/apps/testing/com.storeyinfra.app
```

(I'll send this in your WhatsApp message — just tap it.)

Step 2 — Tap "Become a tester"

The page asks you to confirm you want to join the beta. Tap **Become a tester** → **Accept**.

Step 3 — Open Play Store and search "Storey"

Now the app shows up *for your account only* (it's a closed test — invisible to everyone else).

You may need to wait 5–10 minutes for the search to find it. If you see "Error DF-DFERH-01" — wait 30 minutes and try again. That error means Play Store is still updating your account's view.

Step 4 — Tap Install

The app downloads. ~3 MB. Opens like any other Play Store app.

Part 2 — Your first 5 minutes in the app

Step 5 — Sign up

You have two paths. **Most testers should use Google sign-in** — it's the fastest and most reliable.

Option A (recommended) — Google sign-in: Tap "Continue with Google" → pick the same Gmail you sent us. Done.

Option B — Email + password: Tap "Create account." Enter company name, your name, email, password. You'll receive a confirmation email (from `noreply@storeyinfra.com` — check spam if it doesn't appear).

(A third option — phone-number login via SMS — is available but currently in preview. SMS delivery in NE India can be slow or unreliable. We recommend Google or email signup until the SMS path is fully stable.)

Step 6 — Create your company

First-time contractors are asked: "What's your company name?" Enter the real one — it appears on Work Orders and reports later.

Step 7 — Add your first site

Tap **Sites** → **Add site**. Enter the site name (e.g. "NH-37 Furkating"), location, and the team assigned. Takes 60 seconds.

Step 8 — Try one thing — file a daily log

Tap **Daily Logs** → **New log**. Add: workers present, work done today, weather, one photo. The photo opens the camera; capture, attach, save. That's the core workflow.

Part 3 — Reach me when stuck

Anything not working?

WhatsApp me directly: **+91 98640 66898**

Don't email, don't tap "Report a bug" in Play Store — those go into a queue. WhatsApp gets a reply within hours, usually minutes.

What I'd love your feedback on

These are the v1.2 features I'm building based on tester feedback. If you have an opinion on any of them, tell me — it shapes what ships:

1. **Material budget vs actual** — plan how much cement / sand / steel each site needs, see deviation live
2. **Sub-contractor onboarding** — add Mistri Ramesh-style sub-contractors with agreed amount, scope, payments
3. **Printable Work Order PDF** — one-click signed agreement for each sub-contractor, with variations stacked
4. **"Your data, your Drive"** — every night Storey saves a full backup to YOUR Google Drive. Your data stays with you, always.

If any of these feel essential, urgent, missing, or wrong — tell me on WhatsApp.

What you're committing to as a beta tester

Honest expectations:

You	Me
Open the app once a week	Reply to your WhatsApp messages within 24 hours
Tell me what's broken	Fix it within 2 working days
Tell me what's missing	Build it if 2+ testers ask for the same thing
Stay opted-in for at least 14 days	Never sell your data, never spam you

There's no payment. There's no commitment beyond honest feedback. You can leave the beta any time.

A note on data security

Your data is stored on Amazon's Mumbai servers (Supabase) — the same backbone that runs banking apps in India. Each company's data is fully isolated by encryption and access rules. **No other contractor, no outsider, not even Storey staff** can see your data without your permission.

Once "Your data, your Drive" ships (v1.2), every night Storey will save a complete backup of your data to your own Google Drive. You'll have a copy you can touch, copy to a pen drive, store on your PC — exactly like Tally's data folder. If Storey ever disappears (it won't), you keep every record.
