

Storey — short explainer video script

60–90 seconds · for WhatsApp / LinkedIn / website

Written 2026-05-22

Reality check on what I can build: I can write the script and produce the visuals. I cannot generate the video itself. You record it on your phone (or screen-record on your laptop) using the script below as the narration. 30 minutes of recording for an asset that pays off for months.

The 75-second script (read aloud, pause where marked)

[Hook – 8 seconds]

If you run a construction site, you already know this story.

Attendance is on WhatsApp. Daily logs are on paper. Materials are in three different sheets. And nobody can find anything two weeks later.

[Problem framing – 12 seconds]

Tally tracks your money. But nothing tracks your operations. That's where the leaks happen – cement walks off site, sub-contractor agreements turn into disputes, payments slip.

I'm Karun, and I'm a contractor. I built Storey because nothing existed that didn't try to make our sites look like a Bangalore office.

[What Storey is – 20 seconds]

Storey is a mobile-first site-operations app for contractors in Northeast India.

One app on your supervisor's phone runs attendance, daily logs with date-time-stamped photos, material tracking, tasks, expenses, equipment issue and return.

Multi-tenant, role-based, offline-ready – built for flaky 4G on real sites.

[What's coming – 15 seconds]

In the next four weeks: sub-contractor onboarding with one-click printable Work Orders, material budget vs actual tracking, and daily backup to your own Google Drive – Tally-style data sovereignty, plus cloud, plus mobile.

[Trust – 10 seconds]

Twelve contractors are testing Storey right now. Live on Play Store closed beta. Built solo with AI assistance over the last four months – 171 commits, 30 database migrations, two independent RLS audits.

[Close + CTA – 10 seconds]

Free 30-day trial. WhatsApp me your Gmail at +91 98640 66898 and I'll add you to the beta today.

It's storeyinfra.com. I'm Karun. Reply on WhatsApp if you have questions. I read every message.

Total: ~75 seconds at normal speech pace.

Three ways to film this — pick one

Option A — Selfie video (~20 minutes total)

Easiest. Most authentic. What I'd recommend.

1. Open phone front camera, hold steady or rest on a stand
2. Decent light (face the window, not against it)
3. Read the script in chunks — 3 takes max per chunk
4. Don't aim for polish; founder authenticity > production value
5. Trim with WhatsApp's built-in trim or Inshot (free)

Option B — Screen recording walkthrough (~45 minutes)

Tools needed: Loom (free) on laptop OR OBS (free) for screen + camera overlay.

1. Open `storey-beta-invite.jpg` poster as the opening slide
2. Then `storeyinfra.com` on your laptop — walk through:
 - Landing → sign in
 - Contractor dashboard (the new one shipped today)
 - Tap into a site → show workers, materials, tasks
 - Open the supervisor view in incognito → show the visual-first layout
3. Narrate as you click, using the script above as a guide
4. Loom auto-trims and gives you a sharable link

Option C — PPT-to-video export (~30 minutes)

Use the deck I just built as the visual track.

1. Open `C:\consne\storey-pitch-deck.pptx` in PowerPoint
2. Slide Show tab → Record Slide Show → "From Beginning"
3. For each slide, narrate the relevant section of the script above
4. PowerPoint records your voice over each slide
5. File → Export → Create a Video → MP4

The output is a self-advancing video, ~75 seconds, branded slides + your voice.

What the video should NOT do

- **Don't say "AI-powered."** Storey is built *using* AI but isn't an AI product yet.
 - **Don't promise the v1.2 features as live.** Frame them as "coming in 4 weeks" — they ship in mid-June.
 - **Don't mention SMS / phone OTP.** That path is in preview; lead with Google sign-in.
 - **Don't quote specific final pricing.** Use "free trial · ₹500-5,000 / month / site depending on size" — leaves room for tiering.
 - **Don't show fake test data on screen.** If you're screen-recording, sign in as BuildNE (Karun's real test tenant) — the data feels real because it is.
-

Where to post once it's recorded

Channel	Best length	What to add
WhatsApp Status	30s	First 30 seconds only — hook + what Storey is
WhatsApp Broadcast	75s	Full version + the beta poster as second message
LinkedIn post	75s	Full version + 2-3 paragraphs explaining the journey
Twitter / X	60s	Cut the "what's coming" section — focus on the now
storeyinfra.com landing	Full	Embed in hero section once landing page redesigns
Instagram Reel	60s	Vertical format only — re-record for 9:16

Recording-day prep checklist

- ☐ Charge phone fully
- ☐ Quiet room (no fan, no AC hum, no traffic outside)
- ☐ Daylight from a window facing you
- ☐ Wear a plain shirt — no logos, no patterns that flicker on camera
- ☐ Read the script out loud 3 times before recording
- ☐ Have water nearby
- ☐ First 3 takes will feel awkward — keep recording, take 5 or 6 will be good

The video doesn't have to be perfect. **It has to be real.** Contractors trust a slightly imperfect founder video more than a polished agency reel.
